Investment approach

The manager applies a fundamental approach that is focused on bottom up analysis, where detailed research is conducted prior to any investment decision. It will invest in a concentrated portfolio of industrial shares generally excluding the top five shares by market capitalisation and resources shares. The fund will also generally not invest in any company that does not first pass the manager's five quality filters at the core of the investment process. The fund focuses on stocks with attractive growth and value characteristics. The manager uses its experience to build a concentrated portfolio of 20-40 stocks that have a balance of risk across all sectors.
