

The Power of LifeBooster

For financial adviser use only

LifeBooster is a key benefit of LifeIncome that enables your clients to receive more income in the early years of their retirement.

To enable your client to tailor their income requirements over time, LifeIncome offers two LifeBooster rates of 5% and 2.5%, which optimise starting income while still allowing their income to grow over the life of their investment. For retirees, this means:

- · Their starting income is much higher than if no LifeBooster was applied.
- Their investment is paid back to them in the form of cumulative income sooner.
- They receive more income in the early years of their investment when they are more active and able to enjoy it.

The concept of LifeBooster has been utilised in investment-linked lifetime annuity products across the world for many years.

How LifeBooster works

The LifeBooster rate choosen by you and your client helps to calculate your client's starting income and bring forward future income into the early years. The higher the LifeBooster rate used, the higher the starting income.

Instead of income growing each year in line with full investment returns, future investment returns are discounted by the LifeBooster rate. LifeIncome has a higher starting income, and future income growth is achieved when net investment returns, discounted by the LifeBooster rate, exceed 0%.

LifeIncome offers two LifeBooster rates

Where a LifeBooster 5% rate is used, starting income is higher than that of a LifeBooster 2.5% rate, but future growth is potentially more modest.

Where a LifeBooster 2.5% rate is used, starting income is less than that of a LifeBooster 5% rate, but the potential for future growth is greater.

To illustrate the benefits, let's compare how LifeIncome would work with and without LifeBooster.

First Year Annualised Income

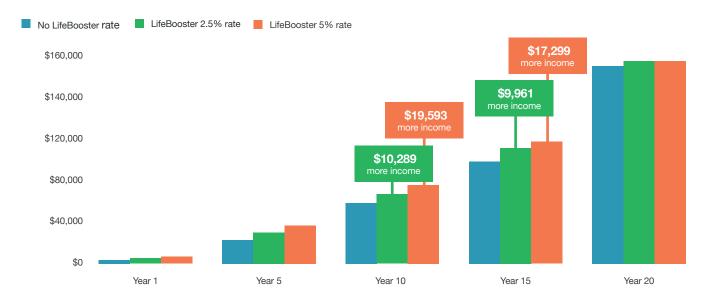

LifeBooster 2.5% No LifeBooster 34% uplift in income Income you will receive without LifeBooster \$4,306 \$5,763

LifeBooster 5%

The graphs below demonstrate that cumulative income is higher in the earlier years of your client's investment, and that your client receives their investment back sooner in the form of income when LifeBooster is applied.

Comparing cumulative income

Please refer to bottom of the document to view assumptions.

Outthinking today.

Assumptions for "Comparing first year income" graph on page 1: 67-year-old male, \$100,000 investment, LifeBooster rate 5% and 2.5%.

Assumptions for "Comparing cumulative income" graph on page 2: Male 67 years old, initial investment \$100,000, estimated total fees, expenses and costs of 0.92%. Vanguard Balanced Portfolio returns from July 1 2006. Past performance is no indication of future performance. In this example Lifelncome without LifeBooster would pay more cumulative income only after the investor exceeds 87 years old for LifeBooster 5% rate, and exceeds 88 years old for LifeBooster 2.5% rate.
