Investment management cost⁴	0.77% p.a.
Buy/sell spread	0.15%/0.15%
Suggested minimum investment period	3 Years
Risk level	3 – Low to Medium

Investment objective

To outperform the benchmark by 2.5% p.a. over rolling 5-year periods.

The benchmark is the 5-year rolling annualised change of Self-Fund Retiree Living Cost Index (LCI). The LCI is published by the Australian Bureau of Statistics.

Investment approach

The manager's approach to real return investing is to choose the portfolio that has the highest probability of achieving the required return objective over the investment horizon with a focus on capital preservation.

The portfolio has been designed to meet the needs of LifeIncome investors. In actively managing the portfolio, the Investment Manager will tactically allocate investments across asset classes and geographic areas (including emerging markets) based on their potential to generate capital growth or reduce overall risk.

Market commentary

September was not all smooth with inflation data firming up whilst labour data moderated. The Fed delivered a larger cut and signalled additional 250bps worth of cuts through 2026. The debate is now around the pace and magnitude of these cuts rather than policy stance. Long term growth prospects however remain uncertain both for the US and globally. We expect the Fed's short-term focus to be a source of volatility with investors constantly adjusting to Fed expectations towards growth and inflation.

Global equities surged to a new time high as central banks globally joined the rate cutting cycle. China's coordinated policy announcements resulted in a rally in Chinese equities. With both the US and China shifting decisively towards supporting growth, the MSCI AC World rose 2%. DM lagged EM with both growing 1.5% and 5.6% respectively.

Treasury yields continue to decline, and the yield curve continues to steepen. Longer dated bond yields are relatively range bound given the supportive growth outlook whilst the short end reacts to further policy easing. Given the well-known geopolitical risks, bond markets may provide a cushion against potential growth shocks.

In Australia, the cash rate did not change and left at 4.35%. The RBA's relatively hawkish view continues to push back against market pricing of rate cuts in 2024. August CPI was in line with expectations and headline fell to 3.5%. Employment remained strong with unemployment rate unchanged at 4.2%.

Portfolio commentary

The Protect portfolio performance has been 0.73% and 6.45% over one month and since inception respectively. This is 63bps higher and 314bps higher than the LCI over the same corresponding period. The biggest contributors to performance over the one-month period have been Asia Pacific and EM equities. Over the longer term, a similar story with equities adding the greatest alpha.

Asset class insights include

Shares vs Fixed Income: close to neutral on risk assets

Overall, we are neutral on risk but up on EM allocations vs DM. The disinflation trend is in the marking but worries about growth is surfacing. We are likely experiencing a normalization but not a imminent start of a recession. The fundamental backdrop is consistent with a mid/late cycle environment which usually produces positive returns albeit with higher volatility. The US election headlines will head into a crescendo as we head into November.

Fact Sheet | 31 September 2024

Australian shares vs Global Shares

Relative signals for Australia vs World has become even more unfavourable with expected earnings growth heading further down in Australia. The commodity terms-of-trade has come off highs and stabilizing at a relatively healthy level. Economic surprises have been a bright spot but are showing signs of fatigue. Our allocation to Australia is neutral to underweight.

Within global equities, regional allocations

We are slightly overweight US whilst remaining laser focused on growth indicators given the soft patch in data that we are seeing. The Fed had commenced the rate cutting cycle with a 50bps. Easing financial conditions have led some more interest rate sensitive sectors to re-rate. Sector dispersion has risen within the US and the quality style is favourable in a mid/late cycle environment.

As we go into the budget given negative government news, we reduced out UK allocation. Soft data has been good and better than elsewhere. Valuations have been cheap, sentiment has been weak and it is underwired. Lately, hard data in UK has been a bit frustrating and underwhelming.

For Japan, the structural story persists as we are getting more cautious with moderating global growth acting as a headwind for the highly cyclical and export heavy Japanese economy. The weaker JPY had helped Japan earnings but going forward the FX uncertainties are real as Bank of Japan kicks off the rates normalization process.

We are currently overweight China with Chinese policy makers wooing the market with a combination of monetary and fiscal stimulus which were above expectations. We added aggressively to China A shares position to benefit from the big turn in sentiment and potential valuation re-rating before earnings turn.

Within fixed income, duration vs. credit

Inflation does not appear to be a big issue anymore and we are getting close enough to target for central banks to not be constrained. Within the Global Aggregate, we are more positive on Euro duration and intend to not chase the US duration rally from here and wait for more attractive entry points.

Correlations with equities is turning negative making bonds more attractive for risk parity and vol targeting funds. Spread risk has increased amidst growth and election uncertainties. So far we have been less worried about an impending default cycle as our overall tracking continued to indicate resilience with low recession probability.

About the investment manager

FIL Investment Management (Australia) Limited ("Fidelity") is part of parent company Fidelity International which was founded in 1969 as the international arm of Fidelity Investments (founded in Boston, US in 1946). Fidelity International became independent of the US firm in 1980, and now invests AUD\$1,080m (as at 31 March 2023) on behalf of more than 2.8 million clients globally. Fidelity International remains a private company – predominantly owned by management and members of the founding family.

About Generation Life

As the pioneer of Australia's first truly flexible investment bond, we have been at the forefront of providing innovative tax-effective investment solutions since 2004. As an innovation led business, we constantly strive to enhance our products and processes to optimise retirement incomes and after-tax investment performance for our investors. We are a leading specialist provider of investment linked annuities and investment bond solutions – with over \$3.3 billion invested with us to date.

Generation Life is a regulated life insurance company and our parent company is listed on the Australian Securities Exchange. Our focus is to continue to provide Australians with market leading tax-effective investment solutions that provide a flexible investment alternative to meet both personal and financial goals.

Our investment solutions are designed to help you grow your wealth, meet your day-to-day investment needs and to help you plan for your future needs including the transfer of wealth to the next generation.

Notes

1. Investment management costs include investment manager's fees, estimated investment expense recoveries and other indirect investment costs as a percentage of the total average assets of the investment option based on latest available information, but excludes indirect transaction and operational costs.
2. Past performance is not an indicator of future performance.
3. The administration fee is deducted directly from the investment option before unit prices are declared.
