- <sup>2</sup> Past performance is not an indicator of future performance.
- <sup>3</sup> The administration fee is deducted directly from the investment option before unit prices are declared.

## Investment objective

The portfolio has a primary objective to exceed the return of the manager's benchmark over a rolling 5-year period, after investment fees but before taxes, and a secondary objective to preserve capital over this period.

## Investment approach

The portfolio is actively managed using a dynamic approach to asset allocation. The strategic asset allocation aims to have exposure to 85% growth assets (Australian shares, international shares, property and infrastructure) and 15% defensive assets (fixed interest and cash) while it can also have exposure to alternative assets (including private markets) that can have both growth and defensive assets. Manager selection is then based on two distinct steps. Firstly, the efficiency of each asset class is assessed to determine whether active or passive investments are used. Secondly, managers are assessed on a quantitative and qualitative basis, selecting managers that are believed to best meet the investment objective. The portfolio gains its exposure generally via managed funds and exchange traded funds but can also invest in listed securities.
